

# ghclass

*an R package for managing classes with GitHub*

JSM 2019 · Denver

[bit.ly/JSM2019\\_ghclass](https://bit.ly/JSM2019_ghclass)

Colin Rump

Univ of Edinburgh · DUK

# **Reproducible Assignments**

# Setup

1. Signup for a GitHub Account

**[github.com](https://github.com)**

2. Get a GitHub personal access token (PAT)

**[github.com/settings/tokens](https://github.com/settings/tokens)**

3. Setup git and GitHub access in R

**use this [setup vignette](#) &  
[happy git with R](#)**

4. Signup for GitHub Education

**[education.github.com/benefits](https://education.github.com/benefits)**

5. Create a GitHub Organization for your class

**[github.com/organizations/new](https://github.com/organizations/new)**

Only *Step 5* needs to be repeated for a new class!

# Introduction to ghclass

```
remotes::install_github("rundel/ghclass")  
library(ghclass)
```

Some design principals behind this package:

1. Functions are prefixed with `org`, `repo`, `team`, `github` or `local_repo` to indicate what they operate on.
2. Functions are vectorized over their parameters, batch related operations.
3. Be verbose about what is happening, report failures but don't halt execution.
4. Most actions are non-destructive (backed by git), the handful of dangerous operations will warn you.
5. Follow the unix design philosophy, work towards simple & composable functions

# Org & Roster

We will be using **ghclass-demo** as our class organization, hopefully your Org has a slightly more informative name .

(I find `course#-semester` works well, e.g. `Sta323-Sp19`).

```
(roster = readr::read_csv("files/roster.csv"))
```

```
## # A tibble: 6 x 4
##   netid email          github          hw01
##   <chr> <chr>          <chr>          <chr>
## 1 za17  anya@school.edu ghclass-anya    hw01-team01
## 2 kb34  bruno@school.edu ghclass-bruno   hw01-team01
## 3 ac13  celine@school.edu ghclass-celine  hw01-team02
## 4 bd88  diego@school.edu ghclass-diego   hw01-team02
## 5 se01  elijah@school.edu ghclass-elijah  hw01-team03
## 6 df00  francis@school.edu ghclass-francis hw01-team03
```

##   Added file 'fizzbuzz.png' to repo 'ghclass-demo/hw01-team03'.
```

## Sta 323 - Homework 1

Due by 11:59 pm on Thursday 1/24/2019.

**FIZZ  
BUZZ  
FIZZBUZZ**

### Background

The FizzBuzz test is a common programming interview language that they claim experience in.

The problem statement is as follows:

"Write a program that given a list of numbers as input, for each number, if the number is divisible by three prints "Fizz" instead of the number and for the numbers that are divisible by both three and five prints "FizzBuzz"."

## Sta 323 - Homework 1

## Cloned 'ghclass-demo/hw01-team01@styler'.  
## Created pull request for 'ghclass-demo/hw01-team01 (master <= styler)'.
```

## styler revisions #4

 **Draft** rundel wants to merge 1 commit into `master` from `styler` 

 Conversation **0**  Commits **1**  Checks **0**  Files changed **1**

rundel commented 15 seconds ago  

This pull request contains the results of running the automated R code formatting tool `styler` on your repo. Styling is based on the [tidyverse R style guide](#).

Click on the commit below to see details of recommended changes. It is not necessary that your code cleanly pass these checks, but if there is a large number of significant changes suggested you should review the style guide with an eye towards potentially improving your code formatting.

@ghclass-anya, @ghclass-bruno, @ghclass-diego, @ghclass-elijah, @ghclass-francis, @ghclass-celine

  Results of running styler:  2f8eadd

# Future Work

- We will be submitting to CRAN in the next month
- Active summer project adding functionality for peer review by Mine Cetinkaya-Rundel and Therese Anders
- Support for GitHub actions for automated feedback ([rundel/wercker](#) replacement)
- Support more workflows, if you use a GitHub based workflow for teaching that was not reflected here please get in touch.

# Thank you!
